

■ Installation Instructions

Step 1: Download the Application

1. Download the latest **ReguFlow AI.exe** executable file provided by your administrator or from the official release page.
2. Save the **.exe** file to a secure and easily accessible location on your computer (e.g., your Desktop or a dedicated C:\Apps\ReguFlow folder).

Step 2: First-Time Launch & AI Initialization

Unlike traditional web apps, ReguFlow AI runs natively on your machine, ensuring your sensitive compliance data remains completely secure and local.

1. Double-click the **ReguFlow AI.exe** file to launch the application.
2. *Note for Windows Defender / SmartScreen:* Because this is a newly downloaded executable, Windows may show a 'Windows protected your PC' prompt. Click **More info** and then click **Run anyway**.
3. The application window will open and display a '**Loading local AI models...**' splash screen.
4. **Please be patient during this initial boot.** The application is configuring its internal database and loading the heavy machine learning weights into memory. This may take a few moments depending on your system's hardware.

Step 3: Accessing the Dashboard

1. Once the background initialization is complete, the splash screen will automatically transition into the live **ReguFlow AI Dashboard**.
2. From here, you can log in, interact with the Copilot, and review your compliance maps!
